Continuous improvement of road maintenance

Whether it's salting, mowing, sweeping, mobile worksites or any other type of activity, you'll always know where and when you've been and where and when you'll need to come back.

Organise your access rights at different levels: local authority, borough, operations center. Share the same data between all users and simply decide which activities to carry out.

Quickly issue kilometer or activity reports

Know how long your machines (spreader, mower...) are in use and the effective kilometers of your vehicles. View activities by zone and type. Check which roads have been maintained and which are due for maintenance. Data are available by minute, hour, day, week, month or year.

Optimise the use of your vehicles and machines

Know where and when your vehicles are being used and what types of activity are underway. Cooperate effectively with your partners and subcontractors throughout the year.

Ensure the safety of your personnel with individual identification. You can also manage journeys in 'privacy' mode.

Our solution is independent of the manufacturer

Statistics of vehicle usage as well as those related to the type of activity (spreading, mowing, sweeping ..) are not related to the machine manufacturer. You can easily change the vehicle while keeping access to all your data.
